Summary

Full Stack Developer with 5+ years of experience building SaaS platforms, RESTful APIs, and scalable web applications. Backend-leaning engineer experienced with Laravel, Node.js, TypeScript, Next.js, React, PostgreSQL, and MariaDB, with hands-on experience in microservices, Docker, and Kubernetes. Experienced in third-party integrations, performance optimization, and full-stack feature ownership.

Experience

- Full Stack Developer, Digital Ninja S.R.L.

Feb 2024 – Present

 - Developed and maintained CurieRO, a SaaS courier integration platform built with Laravel, MariaDB, and Redis, serving 600+ active clients and processing approximately 100K AWBs per month; contributed across its REST API, WooCommerce plugin, and Shopify app, initially developing the frontend and later taking ownership of the backend as a full-stack developer.
 - Developed features to improve operational efficiency, including bulk AWB PDF generation for faster printing, integrations with new courier providers such as Ecolet, and a React-based unified map for managing locker and PUDO delivery points.
 - Designed and implemented RESTful APIs for third-party integrations and developed application modules that expanded the company's product offering.
- Full Stack Developer, Social Marketing Platform S.R.L.

Oct 2021 – Jan 2024

 - Built and deployed client websites and web applications, covering implementation, testing, and production deployment.

Projects

- Distributed notification system for serving large volumes of clients

Project Repo

 - Designed and built a fault-tolerant microservices notification system for high-throughput asynchronous message delivery using Node.js, Kafka, Kubernetes, and ZooKeeper.
- Revista Piata — Full Platform Rebuild

revista-piata.ro

 - Rebuilt from scratch (Joomla to Laravel 12 + React), reducing page load time from 10+ seconds to under 0.6 seconds.
 - Implemented Redis caching, lazy loading, and queue-based image and PDF processing pipeline, decoupling heavy workloads from the request cycle.
 - Delivered in-app PDF-to-flipbook rendering served from cache on repeat requests, eliminating redundant processing.
- Promoapp — Campaign Management Platform

app.promoapp.ro

 - Built a campaign management platform using Next.js, TypeScript, and PostgreSQL, handling 400K+ participant submissions across campaigns within its first year, with tens of thousands of submissions per campaign.
 - Designed a concurrency-safe prize distribution system that prevents race conditions when awarding scheduled or probability-based prizes, ensuring consistent prize allocation under concurrent submissions.
 - Implemented asynchronous file processing to optimize storage usage and handle uploaded files efficiently across participant registration and winner validation workflows.

Education

- Ovidius University of Constanta, Faculty of Mathematics and Informatics

Oct 2024 – Jul 2026

Cyber Security and Machine Learning
- Ovidius University of Constanta, Faculty of Mathematics and Informatics

Oct 2020 – Jul 2023

Computer Science | Thesis: Distributed notification system for serving large volumes of clients
- "Mircea cel Batran" Naval Academy, Faculty of Marine Engineering

Oct 2018 – Jul 2022

Naval Electromechanics

Tech Stack

Languages: TypeScript, JavaScript, PHP, Python, SQL, C++ , C, Java

Frontend: React, Next.js, Vue 3, React Native, Redux, Tailwind CSS

Backend: Node.js, Express.js, Laravel, REST APIs

Databases: PostgreSQL, MariaDB, MySQL, MongoDB, Redis

DevOps: Docker, Kubernetes, GitHub Actions, Git

Platforms: Shopify, WooCommerce, WordPress, Magento, VTEX

Other: Three.js, GSAP, Framer Motion

Languages

Romanian — Native English — Professional working proficiency (B2)
